## Wind Tower Model LP - 6

---

**T**he LP - 6 Wind Tower is a small lightweight integrated package designed to provide lighting from wind power. It is a complete system including turbine, generator, battery, lights, and all necessary control electronics. It is engineered to be robust and able to withstand weather conditions year round, yet it is lightweight enough to be mounted on a standard light pole.

The LP - 6 can also be configured:

- to provide power to remote installations such as communication towers and repeaters
- to provide battery charging to small camps/cottages
- to light highway signs and billboards
- to provide small energy requirements for homes in developing nations
- to power any custom application

New technology in wind power.
